Continental And Oceanic Rifts Geodynamics Series Volume 8:

Continental Rifts: Evolution, Structure, Tectonics K.H. Olsen, 1995-11-24 This multi author book has been prepared by an international group of geoscientists that have been active in rift research since the late 1960s In 1984 an informal grass roots study group was initiated to compare individual research results and to explore in greater depth the apparent differences and similarities in the interpretations from various rift systems The group became known as the CREST working group an acronym of Continental Rifts Evolution Structure and Tectonics which not surprisingly became the title of this book Continental Rifts Evolution Structure Tectonics presents an overview of the present state of understanding and knowledge of the processes of continental rifting from a multidisciplinary lithospheric scale perspective The chapters have been structured on each rift system in approximately the same synoptic sequence so as to facilitate comparisons of rifts by the reader The book complements its predecessors by presenting a more unified picture It succeeds in presenting the status of a representative majority of the continental rift systems that have been at the forefront of recent research For students and experienced researchers alike this book will be of significant value in assessing the current state of knowledge and in serving as a framework for future research *Continental Rifts* Albert Mathieson Quennell, 1985 *Global and Regional Geodynamics* P. Vyskocil, C. Reigber, P.A. Cross, 2012-12-06 Current studies of recent crustal movement are presented using space and terrestrial geodetic methods Results of the studies as well as methodological questions related to monitoring are discussed Papers are grouped within the following section headings Global Plate Motions Instrumentation and Modeling Regional Dynamics Modeling of Deformation Deformation Studies by GPS Horizontal Crustal Movements Vertical Crustal Movements Gravimetry and Crustal Deformation This volume is a comprehensive reference for research scientists and students **Plate Tectonics & Crustal Evolution** Kent C. Condie, 2013-10-22 This substantially revised edition includes recently published information relating to plate tectonics and continental origin A large number of new figures have been added and new sections included on meteorites seismic tomography mantle convection accretionary terranes mantle sources and evolution continental growth secular changes in Earth history also a new chapter on exogenic Earth systems In addition the following topics have been substantially revised lunar origin global gravity origin of the core metamorphism plate boundaries hotspots tectonic settings and magma associations Among the new features the Tectonic Map of the World has also been updated *Tectonics*, 1984-12 *The East African Great Lakes: Limnology, Palaeolimnology and Biodiversity* Eric O. Odada, Daniel O. Olago, 2006-03-09 The Second International Symposium on the East African Lakes was held from 10-15 January 2000 at Club Makokola on the southern shore of Lake Malawi The symposium was organized by the International Decade for the East African Lakes IDEAL a research consortium of African European and North American scientists interested in promoting the investigations of African Great Lakes as archives of environmental and climatic dynamics Over one hundred African European and North American scientists with special expertise in the tropical lakes participated in the

symposium which featured compelling presentations on the limnology climatology palaeoclimatology and biodiversity of the East African Lakes It is their papers that comprise this book The large lakes of East Africa are important natural resources that are heavily utilized by their bordering countries for transportation water supply fisheries waste disposal recreation and tourism The lakes are unique in many ways they are sensitive to climatic change and their circulation dynamics water column chemistry and biological complexity differ significantly from large lakes at higher latitudes they have long continuous high resolution records of past climatic change and they have rich and diverse populations of endemic organisms These unique properties and the significance of the palaeolimnological records demand and attract research interest from around the world

Atmosphere, Ocean and Climate Dynamics John Marshall, R. Alan Plumb, 1986-04-21 For advanced undergraduate and beginning graduate students in atmospheric oceanic and climate science *Atmosphere Ocean and Climate Dynamics* is an introductory textbook on the circulations of the atmosphere and ocean and their interaction with an emphasis on global scales It will give students a good grasp of what the atmosphere and oceans look like on the large scale and why they look that way The role of the oceans in climate and paleoclimate is also discussed The combination of observations theory and accompanying illustrative laboratory experiments sets this text apart by making it accessible to students with no prior training in meteorology or oceanography Written at a mathematical level that is appealing for undergraduates and beginning graduate students Provides a useful educational tool through a combination of observations and laboratory demonstrations which can be viewed over the web Contains instructions on how to reproduce the simple but informative laboratory experiments Includes copious problems with sample answers to help students learn the material

Hydrothermal Processes at Seafloor Spreading Centers Peter A. Rona, Kurt Boström, Lucien Laubier, Kenneth L. Smith, 2013-11-21 During the past ten years evidence has developed to indicate that seawater convects through oceanic crust driven by heat derived from creation of lithosphere at the Earth encircling oceanic ridge rift system of seafloor spreading centers This has stimulated multiple lines of research with profound implications for the earth and life sciences The lines of research comprise the role of hydrothermal convection at seafloor spreading centers in the Earth's thermal regime by cooling of newly formed lithosphere oceanic crust and upper mantle in global geochemical cycles and mass balances of certain elements by chemical exchange between circulating seawater and basaltic rocks of oceanic crust in the concentration of metallic mineral deposits by ore forming processes and in adaptation of biological communities based on a previously unrecognized form of chemosynthesis The first workshop devoted to interdisciplinary consideration of this field was organized by a committee consisting of the co editors of this volume under the auspices of a NATO Advanced Research Institute ARI held 5-8 April 1982 at the Department of Earth Sciences of Cambridge University in

England This volume is a product of that workshop The papers were written by members of a pioneering research community of marine geologists geophysicists geochemists and biologists whose work is at the stage of initial description and interpretation of hydrothermal and associated phenomena at seafloor spreading centers

Ecosystem Dynamics in a Polar Desert, 1998 Presents information from the primary abiotic forces defining the system and from the present hydrology biogeochemistry and physics of major sites of organic carbon production of the McMurdo Dry Valleys Additionally research on the physical chemical and biological properties of the dry valley soils is included The role of environmental management in long term ecological studies is also addressed The accompanying CDROM provides details and scale to visualize the McMurdo Dry Valleys from an ecosystem perspective

Geology of Afar (East Africa) Jacques Varet, 2017-11-14 This book summarizes the geological knowledge accumulated on Afar in the last 60 years demonstrating that it is and will remain a real hot spot for geological and geophysical research It provides insights into the Earth processes along diverging plate boundaries the study of both the continental and oceanic lithosphere and underlying asthenosphere and margins and transitions including magmatic volcanic tectonic sedimentary hydrothermal and geodynamic processes The Afar triangle is a geological depression that developed where the Gulf of Aden Red Sea and East African Rift Valley meet It is considered to be one of the Earth system s most important mantle plumes In 1967 when the first expedition was organized there was little information on the geology of the area and even geographic base maps were lacking However the first satellite photographs from the Apollo and Gemini space missions offered a complete picture of the Red Sea Gulf of Aden region providing a new vision of the Afar triangle The book describes the unique geological features that make Afar the only place in the world where an oceanic plate boundary with all its successive steps of development can be observed in the open air It also presents the Afar triangle as one of the cradles of first now extinct hominids The Middle Awash area contains sites of several fossil discoveries such as the well known Lucy The hydrothermal processes in Afar provide conditions suitable for the study of the most primitive forms of life archaeobacterial and it is also one of the few places where significant quantities of telluric energy are available at the surface for geothermal

development Further the area has economically interesting mineral deposits and illustrates a number of current climate change issues In addition to providing geological information the book shows that Afar is an area where an individual human population developed with its own language and culture and which adapted to the rugged landscape and extremely dry and hot climate It is a valuable resource for scientists and students and also serves the needs of the Afar nation currently split in three different countries as a result of recent historical events
