Coral Reefs:

Coral Reefs Charles Sheppard, 2021 Coral reefs are among the most biodiverse of ecosystems Here Charles Sheppard tells the fascinating story of how and where coral reefs are formed and the variety of marine life they support He highlights the severe threats they face due to climate change pollution and over exploitation and the ongoing conservation efforts to save them *Life and Death Of Coral Reefs* Charles Birkeland, 1997-01-31 Illustrated throughout this book presents what is known about factors that shift the balance between accretion and erosion recruitment and mortality stony corals and filamentous algae recovery and degradation the life and death of coral reefs *Coral Reefs* Walter Deas, Jean Deas, 2005 Reef publication It is a visual experience of one of the great wonders of our planet providing an introduction to the biology and coral reef ecology and it fully identifies many of the corals of the Australasia and Indo Pacific regions **Encyclopedia of Modern Coral Reefs** David Hopley, 2010-11-26 Coral reefs are the largest landforms built by plants and animals Their study therefore incorporates a wide range of disciplines This encyclopedia approaches coral reefs from an earth science perspective concentrating especially on modern reefs Currently coral reefs are under high stress most prominently from climate change with changes to water temperature sea level and ocean acidification particularly damaging Modern reefs have evolved through the massive environmental changes of the Quaternary with long periods of exposure during glacially lowered sea level periods and short periods of interglacial growth The entries in this encyclopedia condense the large amount of work carried out since Charles Darwin first attempted to understand reef evolution Leading authorities from many countries have contributed to the entries covering areas of geology geography and ecology providing comprehensive access to the most up to date research on the structure form and processes operating on Quaternary coral reefs **The Biology of Coral Reefs** Charles R. C. Sheppard, Simon K. Davy, Graham M. Pilling, 2009-06-25 Coral reefs represent the most spectacular and diverse marine ecosystem on the planet as well as a critical source of income for millions of people However the combined effects of human activity have led to a rapid decline in the health of reefs worldwide with many now facing complete destruction This timely book provides an integrated overview of the function physiology ecology and behaviour of coral reef organisms Each chapter is enriched with a selection of boxes on specific aspects written by internationally recognised experts As with other books in the Biology of Habitats Series the emphasis in this book is on the organisms that dominate this marine environment although pollution conservation climate change and experimental aspects are also included Indeed particular emphasis is placed on conservation and management due to the habitat s critically endangered status A global range of examples is employed which gives the book international relevance This accessible text is intended for students naturalists and professionals and assumes no previous knowledge of coral reef biology It is particularly suitable for both senior undergraduate and graduate students in departments of biology geography and environmental science taking courses in coral reef ecology marine biology oceanography and conservation biology as well as the many professional

ecologists and conservation biologists requiring a concise overview of the topic It will also be of relevance and use to reef managers recreational divers and amateur naturalists
