Studies on Experimental Toxicology and Pharmacology Stephen M. Roberts, James P. Kehrer, Lars-Oliver Klotz, 2015-09-30 This book focuses on data describing the roles of free radicals and related reactive species and antioxidants in the causes and treatments of diseases, examining both clinical and pre-clinical trials as well as basic research. The book is divided into sub-sections with chapters on toxicological mechanisms, agents that produce toxicity, and special topics including areas such as antioxidant supplements, oxygen toxicity, toxicogenomics, and marine biology. *Studies on Experimental Toxicology and Pharmacology* promotes the concept of using biomarkers of free radical and reactive species-induced injury as adjuncts to classical laboratory testing and the ability of antioxidants to provide cellular protection. There is increasing evidence that free radicals and other reactive species are causative or at least supporting factors that impact organisms and cause numerous tissue disorders. With contributions from international experts in the field, this volume is a valuable resource for researchers and postgraduate students in toxicology and related fields as well as clinicians and clinical researchers.

Fluorescent Tools for Imaging Oxidative Stress in Biology Amandeep Kaur, 2018-03-02 This thesis advances the long standing challenge of measuring oxidative stress and deciphering its underlying mechanisms and also outlines the advantages and limitations of existing design strategies It presents a range of approaches for the chemical synthesis of fluorescent probes that detect reversible changes in cellular oxidative stress The ability to visualise cellular processes in real time is crucial to understanding disease development and streamline treatment and this can be achieved using fluorescent tools that can sense reversible disturbances in cellular environments during pathogenesis The perturbations in cellular redox state are of particular current interest in medical research since oxidative stress is implicated in the pathogenesis of a number of diseases The book investigates different strategies used to achieve ratiometric fluorescence output of the reversible redox probes which nullify concentration effects associated with intensity based probes It also describes suitable approaches to target these probes to specific cellular organelles thereby enabling medical researchers to visualise sub cellular oxidative stress levels and addressing the typically poor uptake of chemical tools into biological studies In total it reports on four new probes that are now being used by over twenty research groups around the globe and two of which have been commercialised The final chapters of this thesis demonstrate successful applications of the sensors in a variety of biological systems ranging from prokaryotes to mammalian cells and whole organisms The results described clearly indicate the immense value of collaborative cross disciplinary research

Antioxidant Activity of

Polyphenolic Plant Extracts Dimitrios Stagos, 2021-03-19 Antioxidant Activity of Polyphenolic Plant Extracts is a collection of scientific articles regarding polyphenols that are substances occurring naturally in plants and exhibiting many beneficial effects on human health. Among polyphenols, interesting biological properties and their antioxidant activity is considered the most important. This book brings together experts from different research fields on topics related to polyphenols such as their isolation and purification, assessment of their antioxidant activity, prevention from oxidative stress-induced diseases, and use as food additives. The polyphenols used in the present studies are derived from a great variety of plants ranging from well-known species to rare ones that are only found in specific regions. Moreover, some of the studies provide evidence that polyphenols may be used for the prevention and treatment of common diseases such as diabetes mellitus, Alzheimer's disease, cardiovascular and intestinal diseases. Importantly, in several of the studies, green extraction methods for the isolation of polyphenols were developed using modern technologies where few or no organic solvents were used in order to minimize environmental and health impacts.

Multiscale Technologies For Cryomedicine: Implementation From Nano To Macroscale John C Bischof, Shawn Xiaoming He, 2016-06-21 The use of micro nanotechnology in cell and tissue engineering and especially for cell and tissue preservation is at the peak of its activity now, with scientific output expected to continue growing in the coming years. Micro and nanotechnologies have induced paradigm shifts in many scientific fields and as featured in this edited volume, they are having an important impact in the field of cryomedicine. The book gives an overview of the recent progress in implementing multiscale micro and nanoscale technologies to improve the outcome of various cryomedical applications including cryosurgery, cryopreservation, lyopreservation, and to understand the fundamental engineering and science underpinning the applications. This is the first book that will provide both an introductory and in-depth account of applying the multiscale technologies in cryomedicine.

Oxidative Stress Biomarkers and Antioxidant Protocols Donald Armstrong, 2008-02-04 The first protocols book, Free Radical and Antioxidant Protocols 1, was published in late 1998. Sections were divided into three parts covering selected biochemical techniques for measuring oxidative stress, antioxidant (AOX) activity, and combined applications. In choosing the 40 methods to be included in that book, I realized there were considerably more of equal value than that which we could have presented in a single volume. To produce a comprehensive resource, this book and a third are being compiled to expand coverage of the field. A summary of papers 2 published on this important subject emphasizes the continuing rapid growth in oxidative stress investigations relating to our understanding of biochemical reactions, their relevance to pathophysiological mechanisms, how disease may arise, and how therapeutic intervention may be achieved. 3 Although there is some overlap between the categories, the analysis shown below illustrates where current studies are concentrated and are almost evenly distributed between free radicals and AOX. Over the last 4 yr, there has been a 55% increase in the number of papers published in the area.
