**Dangerous Intimacy** Karen Lystra, 2004-04-23 Publisher Description *Cassese's International Criminal Law* Antonio Cassese, 2013-01-31 The third edition of International Criminal Law expounds the general principles governing international crimes as well as the fundamentals of both substantive and procedural international criminal law bringing the political and human contexts to the fore

**The Criminal Responsibility of Senior Political and Military Leaders as Principals to International Crimes** Héctor Olásolo, 2009-05-15 As shown by the trials of Slobodan Milosevic Charles Taylor and Saddam Hussein the large scale and systematic commission of international crimes is usually planned and set in motion by senior political and military leaders Nevertheless the application of traditional forms of criminal liability leads to the conclusion that they are mere accessories to such crimes This does not reflect their central role and often results in a punishment which is inappropriately low in view of the impact of their actions and omissions For these reasons international criminal law has placed special emphasis on the development of concepts such as control of the crime and joint criminal enterprise also known as the common purpose doctrine which aim at reflecting better the central role played by senior political and military leaders in campaigns of large scale and systematic commission of international crimes The Rome Statute of the International Criminal Court and the case law of the ICTY and the ICTR have in recent years played a unique role in the achievement of this goal

Hong Kong's War Crimes Trials Suzannah Linton, 2013-09-26 Immediately after the Second World War 46 trials were held by the British military in Hong Kong in which 123 defendants mainly from Japan were tried for war crimes This book is the first to analyze these trials situating them within their historical context and showing their importance for the development of international criminal law

**Perpetrators and Accessories in International Criminal Law** Neha Jain, 2014-12-01 International criminal law lacks a coherent account of individual responsibility This failure is due to the inability of international tribunals to capture the distinctive nature of individual responsibility for crimes that are collective by their very nature Specifically they have misunderstood the nature of the collective action or framework that makes these crimes possible and for which

liability may be attributed to intellectual authors policy makers and leaders In this book the author draws on insights from comparative law and methodology to propose doctrines of perpetration and secondary responsibility that reflect the role and function of high level participants in mass atrocity while simultaneously situating them within the political and social climate which renders these crimes possible This new doctrine is developed through a novel approach which combines and restructures divergent theoretical perspectives on attribution of responsibility in English and German domestic criminal law as major representatives of the common law and civil law systems At the same time it analyses existing theories of responsibility in international criminal law and assesses whether there is any justification for their retention by international criminal tribunals

*Logical Methods* John N. Crossley, Jeffrey B. Remmel, Richard Shore, Moss E. Sweedler, 2012-12-06 The twenty six papers in this volume reflect the wide and still expanding range of Anil Nerode s work A conference on Logical Methods was held in honor of Nerode s sixtieth birthday 4 June 1992 at the Mathematical Sciences Institute Cornell University 1 3 June 1992 Some of the conference papers are here but others are from students co workers and other colleagues The intention of the conference was to look forward and to see the directions currently being pursued in the development of work by or with Nerode Here is a brief summary of the contents of this book We give a retrospective view of Nerode s work A number of specific areas are readily discerned recursive equivalence types recursive algebra and model theory the theory of Turing degrees and r e sets polynomial time computability and computer science Nerode began with automata theory and has also taken a keen interest in the history of mathematics All these areas are represented The one area missing is Nerode s applied mathematical work relating to the environment Kozen s paper builds on Nerode s early work on automata Recursive equivalence types are covered by Dekker and Barback the latter using directly a fundamental metatheorem of Nerode Recursive algebra is treated by Ge Richards group representations Recursive model theory is the subject of papers by Hird Moses and Khoussainov Dadajanov while a combinatorial problem in recursive model theory is discussed in Cherlin Martin s paper Cenzer presents a paper on recursive dynamics

*Scalable Big Data Analytics for Protein Bioinformatics* Dariusz Mrozek, 2018-09-25 This book presents a focus on proteins and their structures The text describes various scalable solutions for protein structure similarity searching carried out at main representation levels and for prediction of 3D structures of proteins Emphasis is placed on techniques that can be used to accelerate similarity searches and protein structure modeling processes The content of the book is divided into four parts The first part provides background information on proteins and their representation levels including a formal model of a 3D protein structure used in computational processes and a brief overview of the technologies used in the solutions presented in the book The second part of the book discusses Cloud services that are utilized in the development of scalable and reliable cloud applications for 3D protein structure similarity searching and protein structure prediction The third part of the book shows the utilization of scalable Big Data computational frameworks like Hadoop and Spark in massive 3D protein structure alignments and

identification of intrinsically disordered regions in protein structures The fourth part of the book focuses on finding 3D protein structure similarities accelerated with the use of GPUs and the use of multithreading and relational databases for efficient approximate searching on protein secondary structures The book introduces advanced techniques and computational architectures that benefit from recent achievements in the field of computing and parallelism Recent developments in computer science have allowed algorithms previously considered too time consuming to now be efficiently used for applications in bioinformatics and the life sciences Given its depth of coverage the book will be of interest to researchers and software developers working in the fields of structural bioinformatics and biomedical databases
