Bridges Psychic Structures Functions And Processes History Of Ideas Series:

Bridges Rosemary Gordon,2017-11-30 This book encompasses a wide range of author s diverse explorations and provides readers with rich food for thought whether their interest is in clinical or cultural issues of the psyche It re examines the idea of the self and explores the distinction between symbols and symbolic experience *Bridges* Rosemary Gordon,

American Book Publishing Record ,1995 Ego Development and Psychopathology David Ausubel,2018-01-18 Ego Development and Psychopathology presents an original theoretical underpinning for classification and interpretation of the major mental disorders one based largely on the author s clinical experience Ausubel s central thesis is that the most significant and crucial factors predisposing persons to mental disorders are critical developmental defects that arise at vital transitional phases of ego development He sees both normal and pathological personality functioning as most cogently explained in terms of an individual s ego structure at a given point in the life cycle Ausubel relates his developmental theory to the phenomenology and related clinical problems of psychiatric diagnosis He classifies mental disorders in terms of their developmental history Such factors in his opinion offer the most precise delineation of etiological functional and phenomenological similarities and differences among the various psychiatric syndromes He provides an overview of ego development as well as major variants of the norm He also discusses development of conscience and moral values as well as psychopathological considerations that follow from deficiencies defects failure and distortions in ego development He examines at length classification of mental disorders such as anxiety states psychotic depression and mania schizophrenia autism antisocial and narcissistic personality disorders and defense mechanisms Ausubel is careful to point out that ego development is not the only significant determinant of normal and aberrant personality Genetic predispositions situational stress and sociocultural factors must always be taken into consideration since mental disorder is always a product of multiple causality However he believes ego development is by far the most critical factor and hence offers the most for classification of mental illness This intriguing study will be of interest to professionals as well as educated and concerned practitioners in the fields of psychology psychiatry psychoanalysis child psychotherapy and social work Simulating the Mind II Dietmar Dietrich,Volker Hartmann Cardelle,2024-10-04 The declared goal of this book an extended and revised translation of the German edition 2021 is to show how a unified model of the psyche and body can be developed via insights from psychoanalysis neurology and computer technology On the one hand such a model allows for the testing of psychological and social theories on a scientific basis with the help of simulation experiments On the other hand the model developed according to the functional structures of the human brain and psyche provides the basis for artificial intelligence systems These are systems with cognitive capabilities that can save human lives save energy ensure safety at airports provide support in old age care and in the medical field in other words and generally speaking systems that can simplify our lives in a relevant way and on a broad basis A great deal of time and money is invested in genetic engineering and neurology but research into the

mental apparatus in the context of the neurological part i e modeling the brain in a holistic way is sparse in every respect However the results of the scientific project SiMA of which the first author has been a driving force show that the research of this organ which in the authors understanding includes the mental apparatus as a whole is quite feasible today This is also the main message of the book which addresses topics such as artificial intelligence the brain psychoanalysis behavioral models complexity bionics of the mental emotions and feelings consciousness and awareness preconscious and unconscious the functional and not only behavioral description and modeling of the brain and especially of the mental apparatus and some more In the world of technology there is generally little interest in psychoanalysis whereas in the world of psychoanalysis people usually refuse to deal with mathematics and technology especially computer technology Is there an information theory of the brain on the one hand and of computer technology on the other hand The authors attempt to answer this question from both sides With the goal to reach as many readers as possible and to provoke the authors break with traditions and give space to new forms of thinking and argue that it is crucial to take a new path in automation in artificial intelligence and in technical cognitive science but also in psychoanalysis and neurology in order to create a common basis for scientific and technical possibilities that have been previously inaccessible
