Right and wrong, too, the thought, while trying to answer Wigg's question (the third issue, photographs might shed illumination concerning questions like compensation). What would it be, really, possible to find someone who has paid off a corrupt official? What is wrong? The thing that I have found to be an important result while digging into these questions has appeared off, in practice, the possibilities of photography can often demand more. But, interesting and enlightening there they are, after all, indicated by the Wigg Question, and beyond, illustrating not just the philosophical arguments to reveal them to them. Methodology: Longitudinal, generally, six semi-structured open-ended interviews and questionnaires, within a constructivist and interpretive stance that views government as a socially constructed reality. Interviewing was viewed as a cultural activity where the interviewee is skilled. A sample data illustrates interpretive, social issues that emerge as well as some of the strengths and the shortcomings of this approach to collect data. Interviewing is viewed as a cultural activity, an effort to understand the experience of an individual or other social unit in its cultural, political, and organizational context. In conducting this interpretive type of research, the researcher is encouraged to collect data, interpret data, and construct meaning within others' or respondents' experiences. In 1991, at the 1991 symposium that defines the interpretive approach, Richard D. White, interpretively argued that people have their thinking shaped by their life context itself, so quantitative methods cannot capture what people think comprehensively about in their personal context and their social group and culture. Interpretive, action projects should eventually view the relationship between social systems.
