Climatology From Satellites:

Climatology from Satellites Eric Barrett, 2019-10-28 Originally published in 1974 was a pioneering study which summarized within the pre existing framework of atmospheric knowledge the more significant findings that emerged from the first decade of climatological analyses of meteorological satellite data It shows how these data complement and extend the traditional coverage of climatology The book draws together in one volume research findings which were not previously available in book form and which significantly improve the understanding of climate especially in regions that were conventionally data remote

Climatology from Satellites Eric Charles Barrett, 1974-01-01 Analysis and discussion of the use of satellite observations and the fields of climatology where such observations have been of use

Climate Data Records from Environmental Satellites National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Committee on Climate Data Records from NOAA Operational Satellites, 2004-08-26 The report outlines key elements to consider in designing a program to create climate quality data from satellites It examines historical attempts to create climate data records provides advice on steps for generating re analyzing and storing satellite climate data and discusses the importance of partnering between agencies academia and industry NOAA will use this report the first in a two part study to draft an implementation plan for climate data records

Satellite-based Applications on Climate Change John Qu, Alfred Powell, M.V.K. Sivakumar, 2013-03-19 Climate and other environmental changes are drawing unprecedented concern and attention from national governments international organizations and local communities Global warming has left noticeable impacts on the environment and the ecosystems it supports including humans and has important implications for sustainable economic and social development in the future Satellite observations of climate and environmental change have become an increasingly important tool in recent years in helping to shape the response of international communities to this critical global challenge The book presents the latest advances in satellite based remote sensing of the Earth s environment ranging from applications in climate and atmospheric science to hydrology oceanography hydrology geomorphology ecology and fire studies Introductory chapters also cover key technical aspects such as instrumentation calibration data analysis and GIS tools for decision making

Issues in the Integration of Research and Operational Satellite Systems for Climate Research National Research Council, Commission on Physical Sciences, Mathematics, and Applications, Space Studies Board, Committee on Earth Studies, 2000-02-10 This is the second of two Space Studies Board reports that address the complex issue of incorporating the needs of climate research into the National Polar orbiting Operational Environmental Satellite System NPOESS NPOESS which has been driven by the imperative of reliably providing short term weather information is itself a union of heretofore

separate civilian and military programs It is a marriage of convenience to eliminate needless duplication and reduce cost one that appears to be working The same considerations of expediency and economy motivate the present attempts to add to NPOESS the goals of climate research The technical complexities of combining seemingly disparate requirements are accompanied by the programmatic complexities of forging further connections among three different agencies with different mandates cultures and congressional appropriators Yet the stakes are very high and each agency gains significantly by finding ways to cooperate as do the taxpayers Beyond cost savings benefits include the possibility that long term climate observations will reveal new phenomena of interest to weather forecasters as happened with the El Niño Southern Oscillation Conversely climate researchers can often make good use of operational data Necessity is the mother of invention and the needs of all the parties involved in NPOESS should conspire to foster creative solutions to make this effort work Although it has often been said that research and operational requirements are incommensurate this report and the phase one report Science and Design accentuate the degree to which they are complementary and could be made compatible The reports provide guidelines for achieving the desired integration to the mutual benefit of all parties Although a significant level of commitment will be needed to surmount the very real technical and programmatic impediments the public interest would be well served by a positive outcome
