Iterates Of Piecewise Monotone:

Iterates of Piecewise Monotone Mappings on an Interval Chris Preston, 2006-11-15 Piecewise monotone mappings on an interval provide simple examples of discrete dynamical systems whose behaviour can be very complicated These notes are concerned with the properties of the iterates of such mappings The material presented can be understood by anyone who has had a basic course in one dimensional real analysis The account concentrates on the topological as opposed to the measure theoretical aspects of the theory of piecewise monotone mappings As well as offering an elementary introduction to this theory these notes also contain a more advanced treatment of the problem of classifying such mappings up to topological conjugacy *Iterates of Piecewise Monotone Mappings on an Interval* Christopher J. Iteration Theory - Proceedings Of The European Conference C Simo, Christian Mira, Gyoergy Targonski, Norbert Netzer, 1991-07-22 The main topics of this proceedings stress the interactions between the theory of functional equations and the theory of dynamical systems A total of 38 invited lectures are included **Iteration Theory - Proceedings Of The European Conference** W Forg-rob, Norbert Netzer, Christian Mira, Gyoergy Targonski, Detlef Gronau, 1996-07-03 Iteration theory has its roots in the operation of substituting functions into itself This has led to questions like that of the behaviour of functions by repeating this substitution and when the number of iterations tends to infinity The terms orbit and chaos appropriately describe this behaviour Dynamical systems and the theory of functional equations play important roles in this field Iteration Theory (Ecit 91) - Proceedings Of The European Conference J P Lampreia, Jaume Llibre, Christian Mira, Gyoergy Targonski, Jose Sousa Ramos, 1992-12-18 The main theme of the ECIT conferences is Iteration Theory on the borderline between Dynamics and Functional Equations The aim is to foster symbiosis between mainstream dynamics and iteration theory treated in the style of functional equations theory The following topics are focused turbulence and iteration characterization of chaos kneading theory symbolic dynamics bifurcation periods of maps topological dynamics discrete retarded dynamical systems cellular automata as dynamical systems iterative roots of formal power series iterative roots of polynomials phantom iterative roots iterative groups and semigroups families of commuting functions algebraic aspects of iteration theory and functional equations *Thirty Years After Sharkovskii's Theorem: New Perspectives - Proceedings Of The Conference* Luis Alseda, Jaume Llibre, Michal Misiurewicz, Francisco Balibrea, 1996-01-23 These proceedings contain a collection of papers on Combinatorial Dynamics from the lectures that took place during the international symposium Thirty Years after Sharkovski s Theorem New Perspectives which was held at La Manga del Mar Menor Murcia Spain from June 13 to June 18 1994 Since Professor A N Sharkovski s landmark paper on the coexistence of periods for interval maps several lines of research have been developed opening applications of models to help understand a number of phenomena from a wide variety of fields such as biology economics physics etc The meeting served to summarize the progress made since Professor Sharkovski s discovery and to explore new directions *Dynamics in One Dimension*

Louis S. Block, William A. Coppel, 2006-11-14 The behaviour under iteration of unimodal maps of an interval such as the logistic map has recently attracted considerable attention It is not so widely known that a substantial theory has by now been built up for arbitrary continuous maps of an interval The purpose of the book is to give a clear account of this subject with complete proofs of many strong general properties In a number of cases these have previously been difficult of access The analogous theory for maps of a circle is also surveyed Although most of the results were unknown thirty years ago the book will be intelligible to anyone who has mastered a first course in real analysis Thus the book will be of use not only to students and researchers but will also provide mathematicians generally with an understanding of how simple systems can exhibit chaotic behaviour

One-Dimensional Dynamics Welington de Melo, Sebastian van Strien, 2012-12-06 One dimensional dynamics has developed in the last decades into a subject in its own right Yet many recent results are inaccessible and have never been brought together For this reason we have tried to give a unified account of the subject and complete proofs of many results To show what results one might expect the first chapter deals with the theory of circle diffeomorphisms The remainder of the book is an attempt to develop the analogous theory in the non invertible case despite the intrinsic additional difficulties In this way we have tried to show that there is a unified theory in one dimensional dynamics By reading one or more of the chapters the reader can quickly reach the frontier of research Let us quickly summarize the book The first chapter deals with circle diffeomorphisms and contains a complete proof of the theorem on the smooth linearizability of circle diffeomorphisms due to M Herman J C Yoccoz and others Chapter II treats the kneading theory of Milnor and Thurston also included are an exposition on Hofbauer's tower construction and a result on full multimodal families this last result solves a question posed by J Milnor

Combinatorial Dynamics And Entropy In Dimension One (2nd Edition) Luis Alsedo, Jaume Llibre, Michal Misiurewicz, 2000-10-31 This book introduces the reader to the two main directions of one dimensional dynamics The first has its roots in the Sharkovskii theorem which describes the possible sets of periods of all cycles periodic orbits of a continuous map of an interval into itself The whole theory which was developed based on this theorem deals mainly with combinatorial objects permutations graphs etc it is called combinatorial dynamics The second direction has its main objective in measuring the complexity of a system or the degree of chaos present in it for that the topological entropy is used The book analyzes the combinatorial dynamics and topological entropy for the continuous maps of either an interval or the circle into itself

Dynamics Reported, 2012-12-06 DYNAMICS REPORTED reports on recent developments in dynamical systems Dynamical systems of course originated from ordinary differential equations Today dynamical systems cover a much larger area including dynamical processes described by functional and integral equations by partial and stochastic differential equations etc Dynamical systems have involved remarkably in recent years A wealth of new phenomena new ideas and new techniques are proving to be of considerable interest to scientists in rather different fields It is not surprising that thousands of publications on the theory itself and on its various applications are appearing DYNAMICS

REPORTED presents carefully written articles on major subjects in dynamical systems and their applications addressed not only to specialists but also to a broader range of readers including graduate students. Topics are advanced while detailed exposition of ideas restriction to typical results rather than the most general one and last but not least lucid proofs help to gain the utmost degree of clarity. It is hoped that DYNAMICS REPORTED will be useful for those entering the field and will stimulate an exchange of ideas among those working in dynamical systems.

Regularization of Ill-Posed Problems by Iteration

Methods S.F. Gilyazov, N.L. Gol'dman, 2013-04-17

Iteration regularization i.e. utilization of iteration methods of any form for the stable approximate solution of ill posed problems is one of the most important but still insufficiently developed topics of the new theory of ill posed problems. In this monograph a general approach to the justification of iteration regularization algorithms is developed which allows us to consider linear and nonlinear methods from unified positions. Regularization algorithms are the classical iterative methods: steepest descent methods, conjugate direction methods, gradient projection methods etc. complemented by the stopping rule depending on level of errors in input data. They are investigated for solving linear and nonlinear operator equations in Hilbert spaces. Great attention is given to the choice of iteration index as the regularization parameter and to estimates of errors of approximate solutions. Stabilizing properties such as smoothness and shape constraints imposed on the solution are used. On the basis of these investigations we propose and establish efficient regularization algorithms for stable numerical solution of a wide class of ill posed problems. In particular descriptive regularization algorithms utilizing a priori information about the qualitative behavior of the sought solution and ensuring a substantial saving in computational costs are considered for model and applied problems in nonlinear thermophysics. The results of calculations for important applications in various technical fields: a continuous casting, the treatment of materials and perfection of heat protective systems using laser and composite technologies are given.

Grammatical Complexity and One-dimensional Dynamical Systems Huimin Xie, 1996

A combinatorial method is developed in this book to explore the mysteries of chaos which has become a topic of science since 1975. Using tools from theoretical computer science: formal languages and automata, the complexity of symbolic behaviors of dynamical systems is classified and analysed thoroughly. This book is mainly devoted to explanation of this method and apply it to one dimensional dynamical systems including the circle and interval maps which are typical in exhibiting complex behavior through simple iterated calculations. The knowledge for reading it is self contained in the book.
