Design And Analysis Of Fatigue Resistant Welded Structures:

Design and Analysis of Fatigue Resistant Welded Structures Dieter Radaj, 1990-01-03 An English version of a successful German book Both traditional and modern concepts are described Fracture and Fatigue of Welded Joints and Structures K Macdonald, 2011-04-19 The failure of any welded joint is at best inconvenient and at worst can lead to catastrophic accidents Fracture and fatigue of welded joints and structures analyses the processes and causes of fracture and fatigue focusing on how the failure of welded joints and structures can be predicted and minimised in the design process Part one concentrates on analysing fracture of welded joints and structures with chapters on constraint based fracture mechanics for predicting joint failure fracture assessment methods and the use of fracture mechanics in the fatigue analysis of welded joints In part two the emphasis shifts to fatigue and chapters focus on a variety of aspects of fatigue analysis including assessment of local stresses in welded joints fatigue design rules for welded structures k nodes for offshore structures and modelling residual stresses in predicting the service life of structures With its distinguished editor and international team of contributors Fracture and fatigue of welded joints and structures is an essential reference for mechanical structural and welding engineers as well as those in the academic sector with a research interest in the field Analyses the processes and causes of fracture and fatigue focusing predicting and minimising the failure of welded joints in the design process Assesses the fracture of welded joints and structure featuring constraint based fracture mechanics for predicting joint failure Explores specific considerations in fatigue analysis including the assessment of local stresses in welded joints and fatigue design rules for welded structures Fatigue of Structures and Materials J. Schijve, 2008-12-16 Fatigue of structures and materials covers a wide scope of different topics The purpose of the present book is to explain these topics to indicate how they can be analyzed and how this can contribute to the designing of fatigue resistant structures and to prevent structural fatigue problems in service Chapter 1 gives a general survey of the topic with brief comments on the significance of the aspects involved This serves as a kind of a program for the following chapters The central issues in this book are predictions of fatigue properties and designing against fatigue These objectives cannot be realized without a physical and mechanical understanding of all relevant conditions In Chapter 2 the book starts with basic concepts of what happens in the material of a structure under cyclic loads It illustrates the large number of variables which can affect fatigue properties and it provides the essential background knowledge for subsequent chapters Different subjects are presented in the following main parts Basic chapters on fatigue properties and predictions Chapters 2 8 Load spectra and fatigue under variable amplitude loading Chapters 9 11 Fatigue tests and scatter Chapters 12 and 13 Special fatigue conditions Chapters 14 17 Fatigue of joints and structures Chapters 18 20 Fiber metal laminates Chapter 21 Each chapter presents a discussion of a specific subject

Tubular Structures XV contains the latest scientific and engineering developments in the field of tubular structures as presented at the 15th International Symposium on Tubular Structures ISTS15 Rio de Janeiro Brazil 27-29 May 2015 The International Symposium on Tubular Structures ISTS has a long standing reputation for being the principal Heat Effects of Welding Dieter Radaj, 2012-12-06 Almost all welding technology depends upon the use of concentrated energy sources to fuse or soften the material locally at the joint before such energy can be diffused or dispersed elsewhere Although comprehensive treatments of transient heat flow as a controlling influence have been developed progressively and published over the past forty years the task of uniting the results compactly within a textbook has become increasingly formidable With the comparative scarcity of such works welding engineers have been denied the full use of powerful design analysis tools During the past decade Dr Radaj has prepared to fulfil this need working from a rich experience as pioneer researcher and teacher co operator with Professor Argyris at Stuttgart University in developing the finite element method for stress analysis of aircraft and power plant structures and more recently as expert consultant on these and automotive structures at Daimler Benz His book appeared in 1988 in the German language and this updated English language edition will significantly increase the availability of the work
