Designing Incentive Regulation For The Telecommunications Industry:

Designing Incentive Regulation for the Telecommunications Industry David E. Sappington, Dennis L. Weisman, 1996 This book applies new advances in economic theory regarding the asymmetry of information between firms and their regulators to the design of improved telecommunications regulation *The Failure of Antitrust and Regulation to Establish Competition in Long-distance Telephone Services* Paul W. MacAvoy, 1996 MacAvoy shows how antitrust and regulation have failed to make long distance markets competitive to the detriment of consumers seeking prices in line with the costs of providing long distance services The Economics of Telecommunications Systems Noel D. Uri, 2004 The process of formulating and implementing telecommunications policy in the United States often seems chaotic and disorganised with overlapping responsibility and frequent conflicts among federal and state regulators Congress the Administration and the Federal judiciary There has never been a consensus on what should change and what should remain unaltered Telecommunications policy has evolved gradually over a relatively long period of time resulting in a cumulative major transformation It is still tied however to the Communications Act of 1934 Actions have been taken that have gradually moved policy from traditional public utility regulation of a monopoly to greater reliance on market forces and encouragement of competition The policies are an amalgam incorporating elements from a wide range of political and economic views There is nothing endemic in this transformation process to guarantee that the resulting policies have led to greater economic efficiency or that they are better in some subjective sense than alternatives that are available policies that have been implemented in order to evaluate their impact An objective evaluation of the impact of a policy affords an opportunity to make adjustments to it based on the realised economic consequences This approach to policy making can be looked upon as a learning by doing exercise In this book a number of objective studies based on data from various telecommunications systems are presented These studies discuss and evaluate policies that have been implemented In a number of instances the policies have been misguided Recommendations to correct the most egregious problems are offered *Regulation and Entry into Telecommunications Markets* Paul de Bijl, Martin Peitz, 2003-01-09 This book analyses telecommunications markets from early to mature competition filling the gap between the existing economic literature on competition and the real life application of theory to policy Paul De Bijl and Martin Peitz focus on both the transitory and the persistent asymmetries between telephone companies investigating the extent to which access price and retail price regulation stimulate both short and long term competition They explore and compare various settings such as non linear versus linear pricing facilities based versus unbundling based or carrier select based competition non segmented versus segmented markets On the basis of their analysis De Bijl and Peitz then formulate guidelines for policy This book is a valuable resource for academics regulators and telecommunications professionals It is accompanied by simulation programs devised by the authors both to establish and to illustrate their results Handbook of Research on Telecommunications Planning and Management for Business Lee,

In,2009-03-31 This book provides original in depth and innovative articles on telecommunications policy management and business applications Provided by publisher **Handbook on Electricity Regulation** Jean-Michel Glachant,Paul L.
