Schools, Teachers and Teaching Len Barton, Stephen A. Walker, 2011-12-08 This volume considers how various sociological approaches to the exploration of the conditions of teachers might be co-ordinated so as to produce a more penetrating and reliable understanding of the main dimensions of teachers' work. Three dimensions are selected for special attention: historical, institutional and interactional contexts in which teachers operate. In different ways the papers in this collection explore the contribution such an investigation of these contexts can make to our understanding of wider educational concerns.

The Living Economy Paul Ekins, 2017-06-28 First Published in 1986 Routledge is an imprint of Taylor & Francis, an informal company.

The Age of the Social Sal Restivo, 2018-06-12 The concept of society *sui generis* society as a level of reality which could be studied scientifically crystallized in the middle of the nineteenth century in Europe with the work of Durkheim, Marx and Weber and today more than at any other period in history the idea of the social has gained a foothold in philosophy, biology and neuroscience. However this idea has emerged into prominence not through the historical or contemporary efforts of sociologists but mainly through the efforts of biologists and neuroscientists. This book seeks to re-establish the credentials of sociology as the science of society. While acknowledging the amalgamation of traditional disciplines into interdisciplinary and multidisciplinary networks of research and theory and championing interdisciplinarity in recognising the capacity of converging perspectives to yield more interesting general theories of social life the author defends disciplinarity in maintaining sociology's achievements as a discipline. With chapters on the sociological world view, imagining society, the self, love, education, mathematics and religion. *The Age of the Social* re-states the importance of sociology as the source of robust ideas about the social in an age in which this notion has grown in importance. As such it will appeal to scholars across the social sciences with interests in method and philosophy in the social disciplines.

Radical Political Economy: A Concise Introduction Charles A. Barone, 2015-03-26 This straightforward introduction to radical political economy strikes a balance between breadth and depth and was written for the beginning student and others interested in a relatively short text on radical economics.

Creative Technological Change Ian

McCloughlin, 2002-03-11 *Creative Technological Change* draws upon a wide range of thinking from organisational theory, innovation studies and the sociology of technology. It explores the different ways in which these questions have been framed and answered especially in relation to new virtual technologies. The idea of metaphor is used to capture the differences between and strengths and weaknesses of various ways of conceptualising the technology organisation relationship. This approach offers the possibility of developing new ways of thinking about viewing and ultimately responding creatively to the organisational challenges posed by technological change.

Molecular Red McKenzie Wark, 2015-04-21 In *Molecular Red* McKenzie Wark creates philosophical tools for the Anthropocene, our new planetary epoch in which human and natural forces

are so entwined that the future of one determines that of the other Wark explores the implications of Anthropocene through the story of two empires the Soviet and then the American The fall of the former prefigures that of the latter From the ruins of these mighty histories Wark salvages ideas to help us picture what kind of worlds collective labor might yet build From the scientific pioneers who were trying to transform science during the Russia Revolution to visionaries contemplating cyborg possibilities and science fiction dreams in late 20th century California Molecular Red not only looks at the crisis of climate change that we face but also how we might be able to understand it and how we might salvage some hope out of the wreckage

After Full Employment John Keane, John Owens, 2018-12-07 First published in 1986 This book analyses at an introductory level the four main and competing political interpretations of the cause of unemployment and the future of paid work social democracy free market liberalism the disciplinary state and utopian socialism Considered together these four interpretations are highly revealing and challenging They raise considerable doubts about the viability or desirability of policies design to get the jobless back to work Keane and Owens central argument is that the post war policy of full male employment as well as its politic economic and social preconditions are not repeatable Starting with Keynes and Beveridge they explain how and why full employment welfare states developed in Britain and the US and how they had in turn been replaced by the strong state free market programmes of Thatcher and Reagan By focusing on an issue which was and still is at the heart of political debate the book provides a lucid and approachable guide to four key strands of political thought it Britain and the US It will be an ideal introductory text for students of politics sociology and economics

Algorithmic Culture Soonkwan Hong, Stefka Hristova, Jennifer Daryl Slack, 2020-11-24 Algorithmic Culture How Big Data and Artificial Intelligence are Transforming Everyday Life explores the complex ways in which algorithms and big data or algorithmic culture are simultaneously reshaping everyday culture while perpetuating inequality and intersectional discrimination Contributors situate issues of humanity identity and culture in relation to free will surveillance capitalism neoliberalism consumerism solipsism and creativity offering a critique of the myriad constraints enacted by algorithms This book argues that consumers are undergoing an ontological overhaul due to the enhanced manipulability and increasingly mandatory nature of algorithms in the market while also positing that algorithms may help navigate through chaos that is intrinsically present in the market democracy Ultimately Algorithmic Culture calls attention to the present day cultural landscape as a whole as it has been reconfigured and re presented by algorithms

Work in the Spirit Miroslav Volf, 2001-04-27 Since the rise of modern industrial society work has come to pervade and rule the lives of men and women Although there have been many popular books and church documents on the Christian understanding of work this is the first scholarly effort to articulate a developed Protestant theology of work In *Work in the Spirit* Miroslav Volf interprets work from a new perspective in terms of the doctrine of the Holy Spirit He exhaustively explores the nature of work in both capitalist and socialist societies and considers a variety of work including industrial agricultural medical political and artistic work Examining the

importance of alienation in work in industrial and information societies particularly in the relation of workers to management and technology he analyzes various forms of such alienation and elucidates the character of humane work On the basis of the pneumatological theology of work that he develops Volf rejects the traditional Protestant understanding of work as vocation and takes the concept of charisma as the cornerstone for his theological reflection on work He denies that one is called to do a particular work irrespective of one's inclinations and asserts instead that it is our privilege to do the kind of work for which God's spirit has gifted us All human work done in accordance with the will of God Volf argues is cooperation with God in the preservation and transformation of the world

Computing Ruth Woodfield,2000-12-28 Although few dispute the computer s place as a pivotal twentieth century artefact little agreement has emerged over whether the changes it has precipitated are generally positive or negative in nature or whether we should be contemplating our future association with the computer more with enthusiasm or trepidation Specifically with regard to the relationship between women and computers a diverse body of commentary has embraced the views of those who have found grounds for expressing pessimism about this association and those who have favoured a more optimistic assessment of the current situation and its probable future development This book undertakes a thorough evaluation of the legitimacy and predictive power of the optimistic commentary Using a large body of original qualitative data it interrogates the bases of what it identifies as three waves of optimism and in doing so provides answers to some of the key questions asked in this field today **Feminism Confronts Technology** Judy Wajcman,2013-05-29 Feminism Confronts

Science Studies during the Cold War and Beyond Elena Aronova, Simone Turchetti, 2016-09-24 This book examines the ways in which studies of science intertwined with Cold War politics in both familiar and less familiar battlefields of the Cold War Taken together the essays highlight two primary roles for science studies as a new field of expertise institutionalized during the Cold War in different political regimes Firstly science studies played a political role in cultural Cold War in sustaining as well as destabilizing political ideologies in different political and national contexts Secondly it was an instrument of science policies in the early Cold War the studies of science were promoted as the underpinning for the national policies framed with regard to both global geopolitics and local national priorities As this book demonstrates however the wider we cast our net extending our histories beyond the more researched developments in the Anglophone West the more complex and ambivalent both the science studies and the Cold War become outside these more familiar spaces The national stories collected in this book may appear incommensurable with what we know as science studies today but these stories present a vantage point from which to pluralize some of the visions that were constitutive to the construction of Cold War as a juxtaposition of the liberal democracies in the West and the communist East
