Architecture In Context:

Architecture in Context Brent C. Brolin, 1980 *Architecture in Context* Hassan Radoine, 2017-04-26 *Architecture in Context* Designing in the Middle East provides a foundation for understanding the critical context of architecture and design in this region. It does this by presenting a practical overview of architectural know-how in the Middle East and its potential for cultivating a sense of place, introducing local architectural vocabularies and styles, and how they can still be reactivated in contemporary design, exploring the cultural and contextual meaning of forms as references that may influence contemporary architecture, discussing important discourses and trends in architecture that allow a rethinking of the current global-local dichotomy. Highly illustrated, the book covers architecture and design in North Africa, the Levant, the Gulf, and Turkey, Iran, and Iraq. **Architecture in Context: 360 North Michigan Avenue, Etc** Burnham Library of Architecture (Chicago), 1981

Analysing Buildings from Context to Detail in Time Hielkje Zijlstra, 2009 Technology provided the author of this book with the inspiration to develop a more comprehensive research method to assess buildings. *Analysing Buildings from Context to Detail in Time* ABCD Research Method Technology at academic level should be considered in the analysis of a building. In this book, the focus is on construction engineering; the study of the requirements associated with constructing buildings. Providing information on practice is a key element in construction engineering, which is a learning process. Changes are made during the life of a building, and they might be made differently if the history and technical aspects of the building were studied in greater detail. Both maintenance and changes require us to understand the building concerned.

Understanding Context Andrew Hinton, 2014-12-02 To make sense of the world, we're always trying to place things in context, whether our environment is physical, cultural, or something else altogether. Now that we live among digital, always-networked products, apps, and places, context is more complicated than ever, starting with where and who we are. This practical, insightful book provides a powerful toolset to help information architects, UX professionals, and web and app designers understand and solve the many challenges of contextual ambiguity in the products and services they create. You'll discover not only how to design for a given context but also how design participates in making context. Learn how people perceive context when touching and navigating digital environments. See how labels, relationships, and rules work as building blocks for context. Find out how to make better sense of cross-channel, multi-device products or services. Discover how language creates infrastructure in organizations, software, and the Internet of Things. Learn models for figuring out the contextual angles of any user experience. *The Theory of Architecture* Paul-Alan Johnson, 1994-04-18 *The Theory of Architecture* Concepts, Themes, Practices. Paul Alan Johnson. Although it has long been thought that theory directs architectural practice, no one has explained precisely how the connection between theory and practice is supposed to work. This guide asserts that architectural theory does not direct practice but is itself a form of reflective practice. Paul Alan Johnson cuts through the jargon and mystery of architectural theory to clarify how it relates to actual applications in the field.

He also reveals the connections between new and old ideas to enhance the reader's powers of critical evaluation. Nearly 100 major concepts, themes, and practices of architecture as well as the rhetoric of architects and designers are presented in an easily accessible format. Throughout, Johnson attempts to reduce each architectural notion into its essential concept. By doing so, he makes theory accessible for everyday professional discussion. Topics are arranged under ten headings: identification, definition, power, attitudes, ethics, order, authority, governance, relationship, and expression. Areas covered under these headings include: Utopic thought in theories of architecture; Advocacy and citizen participation in architecture; The basis of architectural quality and excellence; The roles of the architect as artist, poet, scientist, and technologist; Ethical obligations of architecture; Rationales for models and methods of design; How authority is determined in architecture; How architects structure their concepts; Conventions of communication within the architectural profession. Each section begins by showing the etymology of key terms of the topic discussed, along with a summary history of the topic's use in architecture. Discussions probe the conceptual and philosophical difficulties of different theories as well as their potential and limitations in past and present usage. Among the provocative issues discussed in terms of their relationship to architecture are chaos theory, feminism, service to the community, and the use of metaphor. Johnson points out, with stunning clarity, the intentions as well as the contradictions and inconsistencies of all notions and concepts. All architects and designers as well as students and teachers in these disciplines will gain many insights about architectural thought in this groundbreaking text.

Enterprise Architecture Function Ingo Arnold, 2022-01-03 This book provides a method to plan, develop, validate, or evolve the design of an enterprise architecture function so that it fully meets the organization's needs. The reader will benefit from this book in two ways. First, it provides a structured overview and orientation to the subject of architecture from an architecture function perspective. Second, it guides through the process of planning, building, and operating your own architecture organization based on a generic architecture function blueprint presented in the form of a pattern language, offering a structured means for navigating, contextualizing, combining, and composing the architecture function patterns. The book is structured in six chapters. Chapter 1, Introduction, explains the starting position and objectives of the book and introduces key concepts that will be explained further in subsequent chapters. Chapter 2, Architecture Function Pattern Language, introduces the concepts of pattern, pattern catalogue, pattern topology, and ontology and explains how these concepts are combined to form a pattern language for planning, designing, and operating an architecture function. Next, Chapter 3, Architecture Function Context, introduces concepts that are crucial for understanding the challenges that an architecture function faces and presents a generic schema for the business organizations and value chain. Chapter 4, Architecture Function Challenge, looks at an architecture function from a black box perspective and outlines the expectations and requirements that companies place on architecture organizations. It discusses the building blocks of an architecture function, the services it provides along the enterprise value chain, and the quality attributes that enterprises expect from their functions. Chapter 5, Architecture Function

Constitution then shifts from a black box perspective to a white box perspective and outlines the generic design of an architecture function in order to realize functional and quality related requirements Chapter 6 Pattern Catalogue eventually introduces the pattern catalogue with a total of 48 architecture function patterns These patterns suggest designs for collaboration between the architecture function and enterprise organizations for the elaboration and development of enterprise services along the enterprise value chain or for aligning architecture governance with enterprise governance The book is intended for a broad readership including enterprise domain and solution architects lecturers and students and anyone else interested in understanding the value proposition responsibilities outcomes methods and practices of architecture functions It introduces the basic concepts and theories needed to understand the pattern language presented and the patterns it summarizes

The question of what architecture is answered in this book with one sentence Architecture is space created for human activities The basic need to find food and water places these activities within a larger spatial field Humans have learned and found ways to adjust to the various contextual difficulties that they faced as they roamed the earth Thus rather than adapting humans have always tried to change the context to their activities Humanity has looked at the context not merely as a limitation but rather as a spatial situation filled with opportunities that allows through intellectual interaction to change these limitations Thus humanity has created within the world their own contextual bubble that firmly stands against the larger context it is set in The key notion of the book is that architecture is space carved out of and against the context and that this process is deterministic

Mobile Agents for Telecommunication Applications Ahmed Karmouch, Thomas Magedanz, Jaime Delgado, 2003-06-30. Research in the telecommunications field suggests that future network infrastructures will be composed of sensors, wireless devices, personal digital assistants, networked appliances and numerous types of services. This brings up key issues such as unfamiliar users and service interfaces, discovering services that match user's needs, finding and tracking people and resources, establishing useful contacts and appropriate associations between resources and users and managing a large number of dynamic network entities all of which must be performed in an automated and proactive manner with a certain degree of autonomy and mobility. These are the main characteristics exhibited by mobile software agent behavior making the technology more suitable for future telecommunication applications and services. It also reveals the tremendous potential for the mobile agent paradigm. The potential complexity of mobile agent operation requires that mechanisms exist on several levels to coordinate its activities. For this purpose research and development on various forms of mobile agents continues to grow in a staggering fashion. Age based applications and services such as network management, e-commerce, information gathering on the Internet, mobile communications, active networking and most recently ad hoc communications are becoming increasingly popular and continue to contribute to the development and to the success of mobile agent.

technology In addition it is well established that mobile agents is an ideal sister technology for mobile ad hoc networks where users applications services devices and networks are mobile and dynamically configurable
