Discourse, Ideology and Specialized Communication Giuliana Garzone, Srikant Sarangi, 2008 This book approaches the issue of ideology in specialized communication in professional institutional and disciplinary settings across domains as diverse as law healthcare corporate management migration NGOs etc What unites the contributors is their commitment to a discourse view of language use i.e. the view that organisational and professional practices are rooted in social ideological orders although a variety of perspectives on the exact nature of the relationship between ideology and discourse can be

discerned in individual chapters The acts of interpretation by participants and analysts alike are invested in ideology explicitly or implicitly This manifest hidden duality surrounding ideology in discourse constitutes the main focus Challenging the traditional presumption of objectivity impersonality and non involvement that has often characterized research on Language for Specific Purposes this book demonstrates how the specialized communication setting is a critical site where ideology is intrinsically embodied in discursive practices

Logical Models of Legal Argumentation H. Prakken,Giovanni Sartor,2012-12-06 In the study of forms of legal reasoning logic and argumentation theory long followed separate tracks Legal logicians tended to focus on a deductive reconstruction of justifying a decision disregarding the dialectical process leading to the chosen justification Others instead emphasized the adversarial and discretionary nature of legal reasoning involving reasonable evaluation of alternative choices and the use of analogical reasoning Recently however developments in Artificial Intelligence and Law have paved the way for overcoming this separation Logic has widened its scope to defensible argumentation and informal accounts of analogy and dialectics have inspired the construction of computer programs Thus the prospect is emerging of an integrated logical and dialectical account of legal argument adding to the understanding of legal reasoning and providing a formal basis for computer tools that assist and mediate legal debates while leaving room for human initiative This book presents contributions to this development From a logical point of view it covers topics such as evaluating

conflicting arguments weighing reasons modelling legal disputes as a dialogue game the role of the burden of proof the relation between principles rules reasons and facts and the relation between deductive and nondeductive arguments Written by leading scholars in the field and building on recent developments in logic and Artificial Intelligence the chapters provide a state of the art account of research on the logical aspects of legal argument
