*Architecture and Mathematics from Antiquity to the Future* Kim Williams, Michael J. Ostwald, 2015-02-11 Every age and every culture has relied on the incorporation of mathematics in their works of architecture to imbue the built environment with meaning and order Mathematics is also central to the production of architecture to its methods of measurement fabrication and analysis This two volume edited collection presents a detailed portrait of the ways in which two seemingly different disciplines are interconnected Over almost 100 chapters it illustrates and examines the relationship between architecture and mathematics Contributors of these chapters come from a wide range of disciplines and backgrounds architects mathematicians historians theoreticians scientists and educators Through this work architecture may be seen and

understood in a new light by professionals as well as non professionals Volume II covers architecture from the Late Renaissance era through Baroque Ottoman Enlightenment Modern and contemporary styles and approaches Key figures covered in this volume include Palladio Michelangelo Borromini Sinan Wren Wright Le Corbusier Breuer Niemeyer and Kahn Mathematical themes which are considered include linear algebra tiling and fractals and the geographic span of the volume s content includes works in the United States of America and Australia in addition to those in Europe and Asia

**Phenomenology, Architecture and the Built World** James Dodd,2017-01-05 Phenomenology Architecture and the Built World is an introduction to the methods and basic concepts of phenomenological philosophy through an analysis of the phenomenon of the built world The conception of the built world that emerges is of space and time fashioned in accordance with a living understanding of what it is for human beings to exist in the world Human building and making is thus no mere supplementary instrument in the pursuit of the ends of life but a fundamental embodiment of the self understanding of human beings Phenomenological description is uniquely capable of bringing into view the physiognomy of this understanding its texture and complexity thereby providing an important basis for a critique of what constitutes its essence and its conditions of possibility *CCDI Architecture* China Construction Design International,2008 A comprehensive monograph of this practice ranked the fastest growing firm in China *Is Architecture Art?* John Macarthur,2024-10-31 Is architecture an art like literature or music Or is it more akin to science or engineering Can buildings be artworks just like paintings and sculptures or does their fundamentally functional nature mean they cannot be considered pure works of art Questions of architecture art and aesthetics do not allow for simple answers But by asking such questions we can usefully reveal the ways in which the concepts and meanings of architecture have changed over the centuries and how they continue to change in the contemporary era *Is Architecture Art* explores the key conceptual questions about the aesthetic appreciation of architecture and its persistently contested status as an artform It engages the work of thinkers ranging from Hume and Kant to Adorno Tafuri and Ranciere and draws on accessible and thought provoking accounts of historical and contemporary architectural and art theory Taking novel approaches to issues that will be familiar to the practising architect it shows how aesthetics and art theory can open up and illuminate architectural theory issue by issue *Is Architecture Art* will provoke discussion and debate among architects and architectural theorists and force a new understanding of the purpose of architectural practice in the contemporary era as the concepts of art the arts and of the creative economy have shifted and blurred as never before

**Mathematical Analysis of Urban Spatial Networks** Philippe Blanchard,Dimitri Volchenkov,2008-10-23 Cities can be considered to be among the largest and most complex artificial networks created by human beings Due to the numerous and diverse human driven activities urban network topology and dynamics can differ quite substantially from that of natural networks and so call for an alternative method of analysis The intent of the present monograph is to lay down the theoretical foundations for studying the topology of compact urban patterns using methods from spectral graph theory and statistical

physics These methods are demonstrated as tools to investigate the structure of a number of real cities with widely differing properties medieval German cities the webs of city canals in Amsterdam and Venice and a modern urban structure such as found in Manhattan Last but not least the book concludes by providing a brief overview of possible applications that will eventually lead to a useful body of knowledge for architects urban planners and civil engineers

**Museum Space** Kali Tzortzi, 2016-03-09 Museums are among the iconic buildings of the twenty first century as remarkable for their architectural diversity as for the variety of collections they display But how does the architecture of museums affect our experience as visitors This book proposes that by seeing space as common ground between architecture and museology and so between the museum building and its display we can illuminate the individuality of each museum and the distinctive experience it offers for example how some museums create a sense of personal exploration while others are more intensely didactic and how the visit in some cases is transformed into a spatial experience and in other cases into a more social event The book starts with an overview of the history of museum buildings and display strategies and a discussion of theoretical and critical approaches It then focuses on specific museums as in depth case studies and uses methods of spatial analysis to look at the key design choices available to architects and curators and their effects on visitors behaviour Theoretically grounded methodologically original and richly illustrated this book will equip students researchers and professionals in the fields of architecture museum studies curating exhibition design and cultural studies with a guide for studying museums and a theoretical framework for their interpretation

**Political Theory and Architecture** Duncan Bell, Bernardo Zacka, 2020-02-20 What can political theory teach us about architecture and what can it learn from paying closer attention to architecture The essays assembled in this volume begin from a common postulate that architecture is not merely a backdrop to political life but a political force in its own right Each in their own way they aim to give countenance to that claim and to show how our thinking about politics can be enriched by reflecting on the built environment The collection advances four lines of inquiry probing the connection between architecture and political regimes examining how architecture can be constitutive of the ethical and political realm uncovering how architecture is enmeshed in logics of governmentality and in the political economy of the city and asking to what extent we can think of architecture tributary as it is to the flows of capital as a partially autonomous social force Taken together the essays demonstrate the salience of a range of political theoretical approaches for the analysis of architecture and show that architecture deserves a place as an object of study in political theory alongside institutions laws norms practices imaginaries and discourses

**A Complete Body of Architecture** Isaac Ware, 1756

**Rebuilding Crime Prevention Through Environmental Design** Rachel Armitage, Paul Ekblom, 2019-02-11 Crime Prevention Through Environmental Design CPTED is a practice oriented approach to reduce the risk of offences such as burglary and fear of crime by modifying the built environment In recent years this approach has been criticised for duplicating terminology and for failing to integrate successfully with other approaches Rebuilding Crime Prevention Through Environmental Design

explores and extends the common ground between CPTED and situational crime prevention another traditional approach in the field of crime prevention and security via the latter's evolution into the field of crime science Drawing on international research to develop new interdisciplinary perspectives this volume explores how situational crime prevention and environmental criminological theories relate to those of Crime Prevention Through Environmental Design and considers how crime science can be reformulated to merge different approaches or at least articulate them better Rebuilding Crime Prevention Through Environmental Design will appeal to students applied academic researchers and practitioners who wish to deepen their understanding and contribute in turn to the ongoing revitalisation of the field

### **Medial Representations**

Kaleem Siddiqi, Stephen Pizer, 2008-09-08 The last half century has seen the development of many biological or physical theories that have explicitly or implicitly involved medial descriptions of objects and other spatial entities in our world Simultaneously mathematicians have studied the properties of these skeletal descriptions of shape and stimulated by the many areas where medial models are useful computer scientists and engineers have developed numerous algorithms for computing and using these models We bring this knowledge and experience together into this book in order to make medial technology more widely understood and used The book consists of an introductory chapter two chapters on the major mathematical results on medial representations five chapters on algorithms for extracting medial models from boundary or binary image descriptions of objects and three chapters on applications in image analysis and other areas of study and design We hope that this book will serve the science and engineering communities using medial models and will provide learning material for students entering this field We are fortunate to have recruited many of the world leaders in medial theory algorithms and applications to write chapters in this book We thank them for their significant effort in preparing their contributions We have edited these chapters and have combined them with the five chapters that we have written to produce an integrated whole

Deleuze and Architecture Helene Frichot, 2013-05-20 Critiques the legacy and ongoing influence of Deleuze on the discipline and practice of architecture This collection looks critically at how Deleuze challenges architecture as a discipline how architecture contributes to philosophy and how we can come to understand the complex politics of space of our increasingly networked world Since the 1980s Deleuze's philosophy has fuelled a generation of architectural thinking and can be seen in the design of a global range of contemporary built environments His work has also alerted architecture to crucial ecological political and social problems that the discipline needs to reconcile

Makers of 20th-Century Modern Architecture Donald Leslie Johnson, Donald Langmead, 2013-05-13 Makers of 20th Century Modern Architecture is an indispensable reference book for the scholar student architect or layman interested in the architects who initiated developed or advanced modern architecture The book is amply illustrated and features the most prominent and influential people in 20th century modernist architecture including Wright Eisenman Mies van der Rohe and Kahn It describes the milieu in which they practiced their art and directs readers to information on the life and creative activities of these founding architects and

their disciples The profiles of individual architects include critical analysis of their major buildings and projects Each profile is completed by a comprehensive bibliography *Architecture's Appeal* Marc J. Neveu, Negin Djavaherian, 2015-02-11 This collection of previously unpublished essays from a diverse range of well known scholars and architects builds on the architectural tradition of phenomenological hermeneutics as developed by Dalibor Vesely and Joseph Rykwert and carried on by David Leatherbarrow Peter Carl and Alberto Perez Gomez Taking an interdisciplinary approach and drawing on ideas from beyond the architectural canon contributors including Kenneth Frampton David Leatherbarrow Juhani Pallasmaa Karsten Harries Steven Holl Indra Kagi McEwen Paul Emmons and Louise Pelletier offer new insights and perspectives on questions such as the following Given the recent fascination with all things digital and novel what is the role of history and theory in contemporary architectural praxis Is authentic meaning possible in a technological environment that is so global and interconnected What is the nature and role of the architect in our shared modern world How can these questions inform a new model of architectural praxis *Architecture's Appeal* is a thought provoking book which will inspire further scholarly inquiry and act as a basis for discussion in the wider field as well as graduate seminars in architectural theory and history

**Queering Architecture** Marko Jobst, Naomi Stead, 2023-01-26 Featuring contributions from a range of significant voices in the field this volume renews the conversation around what it means to speak of the queer in the context of architecture and offers a fresh take on the methodological and epistemological challenges this poses to the discipline of architectural theory Architecture as a discipline a profession and an applied practice is always subordinate to its own conceptual framework which is one of orderliness It refers to buildings but also to infrastructures of thought and knowledge to conventions and taxonomies to structures of governance hierarchies of power and systems of administration How then can one look at queering architectural discourse when the very term queer celebrated for its elusive nature resists and attacks such order Divided into four subsections the essays in this anthology each pursue a distinct line of inquiry methods practices spaces and pedagogies in order to help particularize the proposed queering of architecture They demonstrate the paradoxical nature of the endeavour from a diverse range of perspectives from questions of mapping queer theory in architecture to issues of queer architectural archives or lack thereof to non Western challenges to the very term queer and the queering of basic assumptions across affiliated disciplines *Queering Architecture* not only provides a bold challenge to the normative methods employed in architectural discourse but also addresses how establishing queer methodologies is a paradox in itself

**Architecture's Disability Problem** Wanda Katja Liebermann, 2024-06-21 *Architecture's Disability Problem* explores the intersection of architecture and disability in the United States from the perspective of professional practice This book uncovers why despite the profound effect of the Americans with Disabilities Act on the architectural profession there has been so little interest in design for disability in mainstream architecture To counter this the book investigates alternative approaches to designing with disability through three case studies These showcase both buildings and how design processes

driven by disabled people shape design and professional roles Combining historical research formal and discourse analysis and interviews with people who design construct use buildings and advocate for access the book develops a social understanding of how the buildings work at functional affective and symbolic levels Architecture's Disability Problem is aimed at three primary readers practicing architects architectural scholars and members of disability scholar activist communities Grounded in detailed design studies the author hopes to unearth the social meaning making of architecture related to disability Ultimately the book makes an argument for a focus on disability in its own right as well as on the body in place of the dominance of formal object oriented approaches This book presents and argues for a fundamental shift in the way architectural education policy and practice views and engages with disability It will be key reading for students researchers practitioners and policy makers

*An Architecture of Place* Randall S. Lindstrom, 2024-06-25 Challenging mainstream architecture's understandings of place this book offers an illuminating clarification that allows the idea's centrality in all aspects of everyday design thinking to be rediscovered or considered for the first time Rigorous but not dense practical but not trivialising the book unfolds on three fronts First it clearly frames the pertinent aspects of topology the philosophy of place importantly differentiating two concepts that architecture regularly conflates place and space Second it rejects the ubiquitous notion that architecture makes place and instead reasons that place is what makes architecture and the built environment possible that place calls for and to architecture and that architecture is thus invited to listen and respond Finally it turns to the matter of designing responses that result not just in more places of architecture demanding little of design nor merely in architecture with some sense of place demanding little more but rising above those responses that constitute an architecture of place demanding the greatest vigilance but offering the utmost freedom Opening up a term regarded as so common that its meaning is seldom considered the author reveals the actual depth and richness of place its innateness to architecture and its essentiality to practitioners clients educators and students including those in all spatial disciplines

**Exploring Gender in Vernacular Architecture** Jessica Ellen Sewell, 2025-02-03 In *Exploring Gender in Vernacular Architecture* Jessica Ellen Sewell considers the gender of those who create and shape spaces how gender ideology contributes to and manifests itself in built form and what research methods make the observation of gendered experience possible She discusses single gender mixed gender and queer spaces providing a comprehensive look at how gender influences the design and construction of those spaces how those spaces are used and the relationship between gender and the broader architectural landscape In her study Sewell also provides an expansive view of how gender intersects with other categories of power and difference such as race class and age and how this intersectionality contributes to the design and use of built spaces In addition to examining the spaces themselves Sewell explores research methods for studying gendered experiences in architecture She argues that traditional research methods in vernacular architecture studies which often focus on building based fieldwork should be complemented by other methods such as letters oral histories and diaries

that expand the understanding of buildings beyond their construction date and reveal how those buildings have been used and represented over time Digging into primary records Sewell posits can help challenge our assumptions about who influences architecture and urban development illuminating the roles of women and others in the building and shaping of space Thoroughly researched yet accessible for scholars new to the study of vernacular architecture Exploring Gender in Vernacular Architecture bridges the gap between specialized scholarship and broader public understanding Students of architectural history gender studies and cultural history will find it a valuable resource not only for examining the relationship between gender and architecture but for engaging new methodological tools that may further their own research
