Pullen, Michael J. Kennedy, 2018-10-04 Of the many issues facing special education and general education today it is difficult to imagine one more important or timely than response to intervention RTI Almost overnight RTI has become standard practice across the nation Unfortunately RTI remains ill defined falls far short of its evidence based practice goal is almost invariably misused and often results in more harm than good Nevertheless as a conceptual framework RTI has great potential for ensuring that students with disabilities receive appropriate evidence based instruction The mission of this handbook is to present a comprehensive and integrated discussion of response to intervention RTI and its relation to multi tiered systems of support MTSS in both special education and general education Although the two terms are currently used interchangeably distinct differences exist between them Therefore chapters are dedicated to distinguishing the two concepts RTI and MTSS and describing each one s unique role in both general and special education In addition the authors recommend a third term Multi Tiered Instruction to differentiate the practices related to the purpose of the specific intervention **Handbook of Response to Intervention** Shane R. Jimerson, Matthew K. Burns, Amanda VanDerHeyden, 2007-08-14 Until now practitioners have had access to few detailed descriptions of RTI methods and the effective role they can play in special education The Handbook of Response to Intervention fills this critical information gap In this comprehensive volume more than 90 expert scholars and practitioners provide a guide to the essentials of RTI assessment and identification as well as research based interventions for improving students reading writing oral and math skills Artificially Intelligent Social Risk Adjustment Lisa M. Lines, Marque C. Long, Jamie L. Humphrey, Crystal T. Nguyen, Suzannah Scanlon, Olivia K. G. Berzin, Matthew C. Brown, Anupa Bir, 2022-09-13

Prominent voices have called for a better way to measure predict and adjust for social factors in healthcare and population health. Local area characteristics are sometimes framed as a proxy for patient characteristics but they are often independently associated with health outcomes. We have developed an artificially intelligent approach to risk adjustment for local social determinants of health (SDoH) using random forest models to understand life expectancy at the Census tract level. Our Local Social Inequity score draws on more than 150 neighborhood level variables across 10 SDoH domains. As piloted in Ohio, the score explains 73 percent of the variation in life expectancy by Census tract with a mean squared error of 4.47 years. Accurate multidimensional cross sector small area social risk scores could be useful in understanding the impact of healthcare innovations, payment models, and SDoH interventions in communities at higher risk for serious illnesses and diseases, identifying neighborhoods and areas at highest risk of poor outcomes for better targeting of interventions and resources, and accounting for factors outside of providers' control for more fair and equitable performance quality measurement and reimbursement.
