What Are Physical Properties?

Think of the balls in the diagram below as being in a container. What happens if you remove the balls?

A physical property is a characteristic that can be observed without changing the identity of the substance. Some of the properties of an object can change by observation. For example, you can observe an object's color, volume, shape, size, or weight. In general, the properties of an object are determined by the properties of the materials the object is made of.

Many of the physical properties of materials that make up objects can be measured. These properties include density, hardness, magnetism, and the ability to conduct heat and electricity.

Some physical properties depend on how much of a material you have. An object's mass is proportional to its material. Mass is the amount of matter in an object. Mass is a physical property. Other physical properties that depend on how much of the material you have are volume and density. These are also physical properties. They are called intensive properties because they do not change when you change the amount of the material.
