Its application in academic teaching and professional practice** García-Hípola, Mayka, 2021-05-31 The title of this book pays homage to Vittorio Gregotti's The Territory of Architecture but substituting the word territory for the word landscape because the latter is a more personal concept and is related to the perception of the viewer The goal of this book is to show Students and architects how the time devoted to architectural and landscape Design in all the years of our studies and professional life should be deeply related with research The relation between research and teaching and research and practice is present in two complementary disciplines architecture and landscape Therefore the book is organised into three

main parts The first is devoted to research and its relation with learning and practicing The second part deals with architecture and its relation with research And the third is about landscape and its relation with the two previous parts The title of each one of them is preceded by the particle which not only means at but also around studying these disciplines not only from its own autonomy but also from other parallel discourses

Architectural Thinking in a Climate Emergency Sofie Pelsmakers,James Benedict Brown,2025-10-29 What is the role of architecture and the architect in the Anthropocene It is an immutable fact human activity is driving the climate and biodiversity crises that now threaten all life The damage we inflict on the planet undermines basic human rights displaces millions and intensifies structural racism sexism and segregation with the greatest burden falling on the most vulnerable people and ecosystems Architects must act The design and construction of most buildings and urban environments today are rooted in an economic model that pursues infinite growth Our profession is embedded in a paradigm that favours individual gain over collective benefit We are rewarded for overlooking the interdependence between people and the natural world Architecture contributes directly to environmental degradation and social injustice Architects agree that the profession must change But we lack the tools and knowledge to undertake the transformations that are urgently needed This book aims to address that need through 15 chapters illustrating how we can act collectively to make a difference Architectural Thinking in a Climate Emergency brings together writers researchers educators students and practitioners working at the forefront of this transformation Contributors come from fourteen countries across Africa Asia Europe North and South America and Oceania Many are leading voices in their fields others are emerging thinkers introducing fresh perspectives from both academia and practice Above all they each affirm the architect's responsibility to help transition toward carbon neutral sustainable practices that advance social and environmental justice

El museo vacío Álvaro Fernández Bravo,2017-11-23 Analiza el concepto patrimonio cultural particularmente el que habita en el museo entendido este como organismo público o privado y como un institución de masas que se reinventa constantemente La obra plantea reflexiones críticas acerca de la formación del patrimonio cultural sobre la base del saqueo de la cultura de los otros y la noción de propiedad El autor hace una analogía entre museo vacío y patrimonio vacío o una nación falta de contenido simbólico que necesita llenar con acumulación de material en sus museos Compara naciones como Argentina y Brasil con un patrimonio cultural vacío que fue llenándose con el legado de la cultura indígena con países europeos los cuales gozan de un vasto patrimonio cultural Fernández Bravo afirma que existe una percepción de vacío que acosa la identidad cultural de algunas naciones y que buscar llenar ese vacío mediante estrategias de acumulación como son las colecciones El foco del análisis está puesto no es las piezas coleccionadas en sí sino en los procedimientos coleccionistas que parten de la fragmentación a la composición de un patrimonio cultural
