Large Herbivore Ecology, Ecosystem Dynamics and Conservation Kjell Danell,Roger Bergström,Patrick Duncan,John Pastor,2006-05-25 Most large herbivores require some type of management within their habitats Some populations of large herbivores are at the brink of extinction some are under discussion for reintroduction whilst others already occur in dense populations causing conflicts with other land use Large herbivores are the major drivers for forming the shape and function of terrestrial ecosystems This 2006 book addresses the scientifically based action plans to manage both the large herbivore populations and their habitats worldwide It covers the processes by which large herbivores not only affect their environment e g grazing but are affected by it e g nutrient cycling and the management strategies required Also discussed are new modeling techniques which help assess integration processes in a landscape context as well as assessing the consequences of new developments in the processes of conservation This book will be essential reading for all involved in the management of both large herbivores and natural resources

Arthropod Diversity and Conservation David L. Hawksworth,Alan T. Bull,2007-01-25 Despite their enormous bulk and complexity of architecture plants make up only around a quarter of a million of the 8 million or so species on Earth The major components of biodiversity instead are the smaller largely unseen silent majority of invertebrates most of which are arthropods Vertebrates a mere blip on the biotic horizon are elevated in importance in the bigger scheme of things only by the human psyche This collection of more than 30 peer reviewed papers focuses on the diversity and conservation of arthropods whose species inhabit virtually every recess and plane and feature somewhere in virtually every food web on the planet Highlighting issues ranging from large scale disturbance to local management and from spatial heterogeneity to temporal patterns these papers reflect some of the most exciting new research taking place today and in some of the most biodiverse corners of the planet

Physiology and Biotechnology Integration for Plant Breeding Henry T. Nguyen, Abraham Blum, 2004-01-14 Global demand for wheat rice corn and other essential grains is expected to steadily rise over the next twenty years Meeting this demand by increasing production through increased land use is not very likely and while better crop management may make a marginal difference most agriculture experts agree that this anticipated deficit must be made up through increased crop yields The first resource of its kind Physiology and Biotechnology Integration for Plant Breeding assembles current research in crop plant physiology plant biotechnology and plant breeding that is aimed toward improving crop plants genetically while supporting a productive agriculture ecosystem Highly comprehensive this reference provides access to the most innovative perspectives in crop physiology with a special emphasis on molecular approaches aimed at the formulation of those crop cultivars that offer the greatest potential to increase crop yields in stress environments Surveys the current state of the field as well as modern options and avenues for plant breeders and biotechnologists interested in augmenting crop yield and stability With the contributions of plant scientists from all corners of the globe who are actively involved in meeting this important challenge Physiology and Biotechnology Integration for Plant Breeding provides readers with the background information needed to understand this cutting edge work as well as detailed information on present and potential applications While the first half of the book establishes and fully explains the link between crop physiology and molecular biology the second part explores the application of biotechnology in the effective delivery of the high yield and environmentally stable crop plants needed to avert the very real possibility of worldwide hunger

Food Production and Nature Conservation Iain J. Gordon, Herbert H.T. Prins, Geoff R. Squire, 2016-11-25 Feeding the world's growing human population is increasingly challenging especially as more people adopt a western diet and lifestyle Doing so without causing damage to nature poses an even greater challenge This book argues that in order to create a sustainable food supply whilst conserving nature agriculture and nature must be reconnected and approached together The authors demonstrate that while the links between nature and food production have to some extent already been recognized until now the focus has been to protect one from the impacts of the other Instead it is argued that nature and agriculture can and should work together and

ultimately benefit from one another Chapters describe efforts to protect nature through globally connected protected area systems and illustrate how farming methods are being shaped to protect nature within agricultural systems The authors also point to many ways in which nature benefits agriculture through the ecosystem services it provides Overall the book shows that nature conservation and food production must be considered as equally important components of future solutions to meet the global demand for food in a manner that is sustainable for both the human population and the planet as a whole
