Marinescu,W. Brian Rowe,Boris Dimitrov,Hitoshi Ohmori,2021-11-10 This new edition draws upon the fundamentals of abrasive machining processes and the science of tribology to understand predict and improve abrasive machining processes Each of the main elements of the abrasive machining system is looked at alongside the tribological factors that control the efficiency and quality of the processes described The new edition has been updated to include a variety of industrial applications Grinding and conditioning of grinding tools are dealt with in particular detail and solutions are proposed for many of the most commonly experienced industrial problems such as poor accuracy poor surface quality rapid tool wear

vibrations workpiece burn and high process costs The entire book has been rewritten and restructured with ten completely new chapters Other new features include Extensive explanations of the main abrasive machining processes such as grinding including reciprocating and creep feed grinding high speed high efficiency deep grinding external and internal cylindrical grinding and centerless grinding honing superfinishing lapping polishing and finishing Discussions of the new classes of abrasives abrasive tools and bonding materials New case studies and troubleshooting on the most common grinding practices New coverage on grinding tool conditioning mechanical dressing and nonmechanical dressing processes Detailed explanations of the effects of process input parameters such as cutting parameters workpiece material and geometry and abrasive tools on process characteristics workpiece quality tool wear and process parameters such as cutting forces and temperature as well as achievable material removal rate Updated topics regarding process fluids for abrasive machining and fluid delivery

**Guide to industrial assessments for pollution prevention and energy efficiency , Analysis of Material Removal Processes** Warren R. DeVries, 2012-12-06 Metal removal processes cutting and grinding in this book are an integral part of a large number of manufacturing systems either as the primary manufacturing process or as an important part of preparing the tooling for other manufacturing processes In recent years industry and educational institutions have concentrated on the metal removal system perhaps at the expense of the process This book concentrates on metal removal processes particularly on the modeling aspects that can either give a direct answer or suggest the general requirements as to how to control improve or change a metal removal process This modeling knowledge is more important with automated computer controlled systems than it has ever been before because quantitative knowledge is needed to design and operate these systems This senior undergraduate graduate textbook is aimed at providing the quantitative knowledge often times at an elementary level for handling the technological aspects of setting up and operating a metal removal process and interpreting the experience of planning operating and improving a metal removal process based on rule of thumb approaches
