The Reputational Premium Paul M. Sniderman, Edward H.

Stiglitz, 2012-07-22 The Reputational Premium presents a new theory of party identification the central concept in the study of voting Challenging the traditional idea that voters identify with a political party out of blind emotional attachment this pioneering book explains why party identification in contemporary American politics enables voters to make coherent policy choices Standard approaches to the study of policy based voting hold that voters choose based on the policy positions of the two candidates competing for their support This study demonstrates that candidates can get a premium in support from the policy reputations of their parties In particular Paul Sniderman and Edward Stiglitz present a theory of how partisans take account of the parties policy reputations as a function of the competing candidates policy positions A central implication of this theory of reputation centered choices is that party identification gives candidates tremendous latitude in their policy positioning Paradoxically it is the party supporters who understand and are in synch with the ideological logic of the American party system who open the door to a polarized politics precisely by making the best informed choices on offer

Voting and Political Representation in America Mark P. Jones, 2020-02-24 Examines voting trends and political representation in the United States today with a special focus on debates over voting rights voter fraud and voter suppression and election rules and regulations including those related to gerrymandering campaign fundraising and other controversial subjects Do average Americans have a voice in Washington Are they well represented or are they marginalized Do elections reflect fundamental democratic institutions and values or are they tarnished by voter suppression voter fraud gerrymandering or other factors To what extent do America's elected officials reflect the diversity of race religion gender socioeconomic background sexual orientation and political views of the wider American population This encyclopedia explores all these questions and more It examines important mechanisms and laws shaping political representation in America in the 21st century such as term limits gerrymandering the Electoral College and direct democracy ballot initiatives and referendums and the degree to which various demographic groups are represented in state and federal legislatures from Latinos and senior citizens to atheists and residents of rural states It also explains the basis for escalating concerns about both voter fraud and voter suppression

 p -Adic Local Zeta Function and the Monodromy Conjecture for Non-Degenerate Surface Singularities Bart Bories, Willem
Veys, 2016-06-21 In 2011 Lemahieu and Van Proeyen proved the Monodromy Conjecture for the local topological zeta
function of a non degenerate surface singularity The authors start from their work and obtain the same result for Igusa's p
adic and the motivic zeta function In the p adic case this is for a polynomial $f \in \mathbb{Z}[x, y, z]$ satisfying $f(0, 0, 0) = 0$ and non degenerate
with respect to its Newton polyhedron we show that every pole of the local p adic zeta function of f induces an eigenvalue of

the local monodromy of f at some point of $f^{-1}(0)$ close to the origin Essentially the entire paper is dedicated to proving that for f as above certain candidate poles of Igusa's p -adic zeta function of f arising from so called B1 facets of the Newton polyhedron of f are actually not poles This turns out to be much harder than in the topological setting The combinatorial proof is preceded by a study of the integral points in three dimensional fundamental parallelepipeds Together with the work of Lemahieu and Van Proeyen this main result leads to the Monodromy Conjecture for the p -adic and motivic zeta function of a non degenerate surface singularity

Automatic Autocorrelation and Spectral Analysis Petrus M.T. Broersen, 2006-08-02 Automatic Autocorrelation and Spectral Analysis gives random data a language to communicate the information they contain objectively It takes advantage of greater computing power and robust algorithms to produce enough candidate models of a given group of data to be sure of providing a suitable one Improved order selection guarantees that one of the best often the best will be selected automatically Written for graduate signal processing students and for researchers and engineers using time series analysis for applications ranging from breakdown prevention in heavy machinery to measuring lung noise for medical diagnosis this text offers tuition in how power spectral density and the autocorrelation function of stochastic data can be estimated and interpreted in time series models extensive support for the MATLAB ARMAse1 toolbox applications showing the methods in action appropriate mathematics for students to apply the methods with references for those who wish to develop them further
